AY-800

Meet the new AY-800, a unique boat designed to enhance comfort and versatility combined with effortless operation. The AY-800 will be built using aluminium 5083, this type of aluminium is known for exceptional performance and is highly resistant to seawater and other extreme environments. The AY-800 aluminium will be cut using water and we will make sure that the AY-800 will be recyclable as much as possible

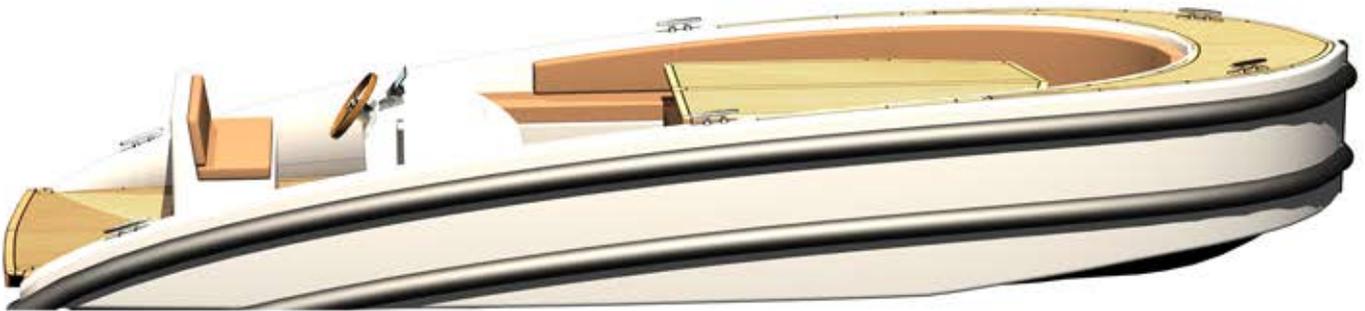

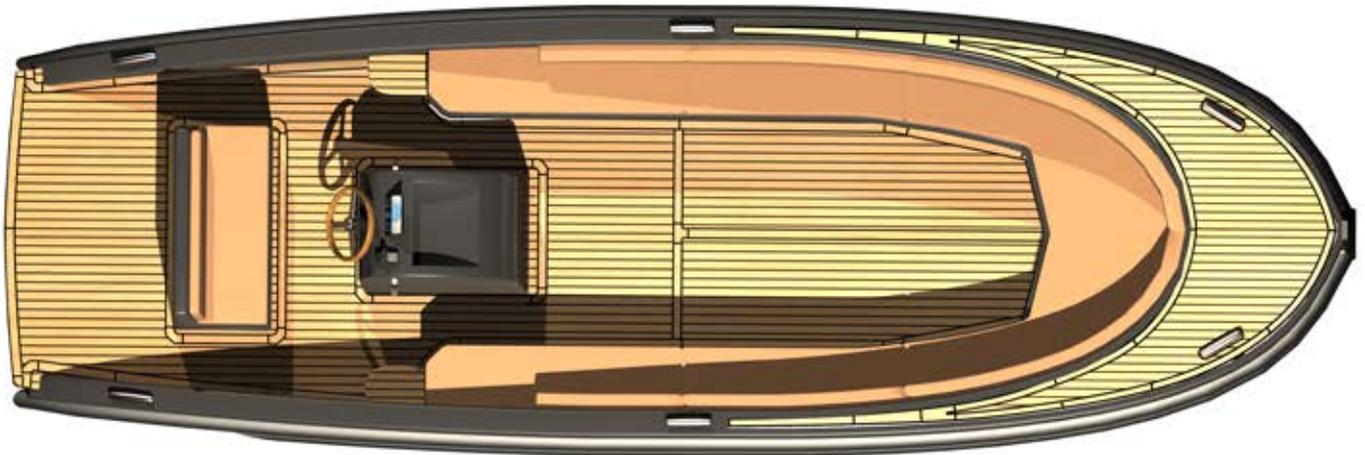

The AY-800 is not only environmentally friendly but will be seaworthy and will also be setting a standard for the future.

AY-800

Has a wide variety of electrical engines and battery packs you can choose from depending upon your needs. Whether you want speed, longer range or more, the AY-800 can be personalized completely to your wishes with lots of options.

The flush deck and weather proof cushions provide impressive hose-and-go readiness. The one-handle control and bow thruster (option) make the AY-800 easy to maneuver and its polyurethane fender bars provide the AY-800 with great protection without the hassle of normal fenders.

The AY-800 is therefore not only suitable as a luxury tender or day boat but is also ideal for boat rental companies worldwide.
